SUBJECT INDEX

Acetaminophen, zonal hepatic injury 312
2-Acetylaminofluorene, zonal hepatic injury 313
Acetylcholinesterase inhibitors, kinetic–dynamic responses 72
Acetyl-CoA carboxylase, zonation in liver 291
N-Acetylcysteine 386
Acidification, mineralocorticoids 20
Addressins 247, 248
Adenosine-3′,5′-monophosphate, role in cirrhosis 85
Na^+,K^+-Adenosine triphosphatase, effects of aldosterone 10, 18
Adenosine triphosphate, effect of aldosterone 17
Adhesive interactions in angiogenesis and metastasis 239–260
Adrenal cells, serum-free culture 367
α-Adrenoceptor blockers, kinetic–dynamic responses 70
β-Adrenoceptor blockers, kinetic–dynamic responses 72
Age
  antidepressant toxicity 115
  antihypertensive drug response 74
Agranulocytosis, induced by antidepressant drugs 108, 115
Albumin, zonation in liver 298
Aldosterone
  acidification 20
  gene expression 6
  K^+ transport 18
  lipid metabolism 16
  Na^+ transport 12
Aldosterone induced proteins 7
Aldosterone receptors 2
O^6-Alkylguanine DNA alkyltransferase, inhibition by arsenic 38
Allyl alcohol, zonal hepatic injury 310
Amiloride 13
Amineptine
  hepatotoxicity 107
  idiosyncratic toxicity 116
Amino acid metabolism, zonation in liver 293
2-Aminofluorene
  peroxidase-catalysed DNA adducts 268
  prostaglandin H synthase-dependent oxidation 267
2-Amino-3-methylimidazo(4,5-f)quinoline, metabolism by prostaglandin H synthase 267
5-Aminosalicylic acid, treatment of inflammatory bowel disease 396
Amitriptyline
  hepatotoxicity 107
  idiosyncratic toxicity 116
  neurotoxicity 109
Ammonia metabolism, zonation in liver 295
Angiogenesis, metastasis, adhesive interactions 239–260
Angiotensin converting enzyme inhibitors
  adverse effects 193
  hemodynamic and symptomatic effects in chronic heart failure 190, 193
  mechanism of action 189
  pharmacological properties 187
  post myocardial infarction studies 191
  reperfusion injury and free radicals 192
Antidepressants, idiosyncratic reactions 105–125
  amineptine 116
  amitriptyline 116
  carbamazepine 117
  host factors and drug metabolism 115
  5-HT re-uptake blockers 117
hypersensitivity reactions 112, 117
  lofepramine 118
  metabolism 111
  mianserin 118
  monoamine oxidase inhibitors 119
  nomifensine 119
  organ directed toxicity 106
  pharmacogenetics and drug metabolism 114
  structure 109
  zimeldine 120
Antifibrogenic therapy, cirrhosis 82, 91
Antihypertensive drugs 67–79
  dose–concentration–response relationships 68
  kinetic–dynamic responses 70
    constancy and predictability 74
    individualized dosage and regimes 75
    variability
Antiinflammatory drugs, treatment of liver cirrhosis 87
Antioxidant defense mechanisms
  endogenous 382
  exogenous 383
Anti-oxidant therapy, inflammatory bowel disease 396
Anti-oxidant vitamins, inflammatory bowel disease 393
Anti-tumor promoters, effect on DNA damage 146
Apical membrane, aldosterone effects on Na^+ transport 12
Aplastic anemia, induced by antidepressants 108
Arachidonic acid
  metabolism and generation of free radicals 378
  metabolism by prostaglandin H synthase 262
    carcinogeneis 268
Arachidonic acid cascade inhibitors, treatment of inflammatory bowel disease 399
Arsenic, carcinogenesis
  DNA repair and gene expression 37
  threshold effects and multiple targets 34
Asbestos, oxidative DNA damage 144
Ascorbic acid
  chromium reductant 44
  inflammatory bowel disease 393
L-Azetidine-2-carboxylic acid, treatment of liver cirrhosis 92

Bacteria, inflammatory bowel disease 391
Basolateral membrane, effect of aldosterone 17
Benzidine, metabolism by prostaglandin H synthase 267

Benzo(a)pyrene
DNA interaction 144, 147
prostaglandin H synthase-dependent oxidation 266
ROS formation 136
Beryllium, carcinogenesis 36
cellular immunity and nucleic acid metabolism 50
Bile
cholesterol nucleation 173
cholesterol supersaturation 172
zonation of formation 306
Bile acids 167
detergency 168
inflammatory bowel disease 390
ionizing properties 171
lipophilicity 168
treatment of gallstones 174
water solubility and pH dependence 170
zonation of synthesis in liver 306, 316
Blood pressure, antihypertensive drugs 67–79
BM 15766 314
Breast cancer cells, serum-free culture 368
Brefeldin A 14

Cadmium
carcinogenesis 36
protein interactions and gene expression 51
zonation of hepatotoxicity 315
Caffeic phenethyl ester 146
Calcium, tumor metastasis 34
Calcium antagonists, kinetic–dynamic responses 70
Capillary tube formation, effect of extracellular matrix elements 244
Captopril 187, 188
effect on chronic heart failure 190, 191, 193, 194
Carbamazepine
bioactivation 117
cocaine interactions, genetic differences 229
hematologic toxicity 108
hepatotoxicity 107
idiosyncratic toxicity 117
Carbohydrate metabolism, zonation in liver 288
Carcinogenesis 128
metals 31–65
ROS and oxidative DNA damage 149
Carcinogens
activation by prostaglandin H synthase 263, 266
mediated ROS formation and utilization 135
Carnitine palmitoyltransferase, zonation in liver 292
Catalase
endogenous 382
exogenous 385
CD44, tumor metastasis 247
Cell culture 355
serum-free 357–368
Cell transformation, role of ROS 149
Chelating agents, effect on free radical-mediated injury 385
Chenodeoxycholic acid, treatment of gallstones 174
Cholelithiasis 171
cholelitholysis 178
pharmacotherapy 174
Cholephilic compounds, zonal transport 306

Cholesterol
gallstone formation 173
gallstone treatment 174
nucleation 173
serum-free cell culture media 367
supersaturation in bile 172
synthesis in liver, zonation 293, 316
Chromium, carcinogenesis
redox processing and DNA interactions 39
ROS induction 138
speciation and complex chemistry 35
Chromosomes
effect of arsenic 38
effect of chromate 40
effect of nickel 48
Chronic heart failure, angiotensin converting enzyme inhibitors 187–197
Cigarette smoke, free radicals 380
Cilazapril 188, 189
effect on chronic heart failure 190
Cirrhosis, fibrogenesis 81–104
antithrombogenic therapy 91
antiinflammatory and immunosuppressor therapy 87
hepatoprotection 85
loss of GS-positive cells 297
treatment to eradicate etiologic agent 84
Citrate synthase, in kidney, stimulation by aldosterone 10, 17
Clofibrate, zonal hepatic injury 314
Cocaine-related behaviours, pharmacogenetic techniques 224
Colchicine, treatment of liver cirrhosis 88
Collagen
antifibrogenic therapy 91
steroid effects on synthesis 87
Collagenase inducers, treatment of liver cirrhosis 94
Collagen propeptides, treatment of fibrosis 95
Collagen receptor integrins 250
Colon, anti-oxidant potential 394
Concentration–effect analysis 69
antihypertensive drugs 71
Conjugation reactions, zonation in liver 304
Copper
inflammatory bowel disease 392, 393
zonation of hepatotoxicity 315
Copper(II)3,5-diisopropylsalicylic acid 385
Corticosteroids, treatment of inflammatory bowel disease 398
Corticosterone binding protein 4
Crohn's disease 388
immunoregulation 393
intestinal epithelial permeability 394
mucin depletion 392
smoking 380
therapy 395
trace elements and vitamin deficiency 392
Curcumin 146
Cyclic nitroxides 385
Cytochrome oxidase 382
Cytochrome P450 isoenzymes in liver
acinar localization 301
development 303
Cytochrome P450 monooxygenase, zonation in liver 300

Desferal-Mn 385
treatment of inflammatory bowel disease 398
Desferoxamine 386

Desipramine, hepatotoxicity 107
Development, liver 279
  amino acid and nitrogen metabolism 296
  carbohydrate metabolism 291
  cytochrome P450 303
  enzyme gradients 284
  hepatocyte proliferation 282
  lipid metabolism 293
Diethylnitrosamine, zonal hepatic injury 313
3,4-Dihydroxybenzoate 93
7,12-Dimethylbenz(a)anthracene
  formation of oxidized DNA bases 147
  ROS formation 136
Dimethylsulfoxide 385
Dimethylthiourea 385
DNA
  effect of arsenic on repair processes 37
  cadmium binding 51
  carcinogen-induced damage 144
  carcinogen-mediated formation of oxidized bases 147
  chromium-induced damage 40
  effect of ionizing radiation 139
  metal compound induced damage 32
  nickel-induced damage 48
  tumor promoter induced damage 142, 145
DNA ligase II, inhibition by arsenic 38
Dothiepin, hepatotoxicity 107
Doxazosin, kinetic-dynamic responses 70
Drug abuse, pharmacogenetic studies 224

Eagle's MEM 357
Ebselen 386
E-cadherin 250
EGCG 146
Enalapril 188
  effect on chronic heart failure 190, 191
  kinetic–dynamic responses 72, 76
Endothelial cells, inflammatory bowel disease 390
Endothelial cell trigger mechanism, free radical-mediated reperfusion injury 388
Endothelial-leukocyte adhesion molecule-1 240
  tumor metastasis 246
Energy metabolism, zonation in liver 286
  Enterhepatic drugs 175
Epidermal growth factor, zonation in liver 319
Epithelial cells, serum-free culture 365
Epithelial tissues, effect of mineralocorticoids 11
Epoxide hydrolase, zonation in liver 303
Ethanol oxidation and pathology, zonation in liver 309
N-Ethoxycarbonyl-2-ethoxy-1,2-dihydroquinoline, Na^+ transport 13
Extracellular matrix
  angiogenesis 242
  tumor interactions 249

Fatty acid binding protein, zonation in liver 292
Fatty acid oxidation, zonation in liver 292
α-Fetoprotein, zonation in liver 298
Fetuin 368
Fibrinogenesis in cirrhosis 81–104
  antifibrogenic therapy 91
  antiinflammatory and immunosuppressor therapy 87
  hepatoprotection 85
  interferons 84
Fibroblasts, serum-free culture 366
Fibronectin 249
Fibrosis, liver, ethanol induced 310
Fluorescence-activated cell sorter, hepatocytes 279
Fluoxetine
  hepatotoxicity 107
  idiosyncratic toxicity 118
Fluvoxamine
  hepatotoxicity 107
  idiosyncratic toxicity 118
Fosinopril 188, 189
Free radicals
  anti-oxidant defense mechanisms 382
  inflammatory bowel disease 388
  ischemia/reperfusion injury 192, 386
  sources 377
  tissue injury 380

Gallstones 171
  cholesterol nucleation 173
  cholesterol supersaturation 172
  formation of 173
  pharmacotharapy 174
Garlic and onion oils 146
Gemfibrozil 314
Gene amplification, arsenic 39
Gene expression, zonation in liver 317, 321
Genetic correlation, drug responses 219
Genetic selection, behaviour and drug responses 221
Giant cells, carcinogenesis 150
Glucocorticoids
  antifibrogenic activity 87
  treatment of inflammatory bowel disease 398
Gluconeogenesis, zonation in liver 289, 315
Glucuronidation, zonation in liver 304
Glutamate, uptake in liver, zonation 294, 316
Glutamine, uptake in liver, zonation 294
Glutamine synthetase, in liver, zonation 295, 316
γ-Glutamyltransferase, zonation in liver 306
Glutathione
  chromium complexes 43
  peroxidase-catalysed conjugate formation 269
  zonation in liver 305
Glutathione *S*-transferases, zonation in liver 305
Glycogen metabolism, zonation in liver 288
Glycolysis, zonation in liver 290, 315
Growth factors, serum-free cell culture media 360
Guillain–Barre syndrome, antidepressant effects 109

H^+, secretion, mineralocorticoids 20
Halothane, zonal hepatic injury 312
H-CAM/CD44 247
Heat shock proteins, induction by arsenic 39
Hematologic system, antidepressant toxicity 108
Hematopoietic cells, serum-free culture 363
Hemochromatosis 83
Hemolytic anemia, induced by antidepressant drugs 109
Hepatitis, antidepressant drugs 107
Hepatitis virus, treatment 84
Hepatocyte heterogeneity 276
  determination and regulation 316
  functional significance 315
  gene expression 317, 321
  methods for studying 277
  proliferation 282
  zonation of intermediary metabolism 284

zonation of metabolism of endo- and xenobiotics 299
zonation of pathology 308
Hepatoprotection, liver cirrhosis 85
Hermes-1 247
Heterochromatin, nickel interactions 49
Hormones
serum-free cell culture media 360
zonation in liver 319
Hybridomas, serum-free culture 365
Hydrogen peroxide
oxidative DNA damage 142
tumor promoter induced formation 133
Hydroperoxide-dependent oxidation of xenobiotics 263
8-Hydroxyl(oxo)guanine
effect of ionizing radiation 141
effect of tumor promoters 143
5-Hydroxymethyl uracil 139
11-β-Hydroxysteroid dehydrogenase, mineralocorticoid receptors 4
5-Hydroxytryptamine re-uptake blockers, idiosyncratic toxicities 117
Hypertransaminasemia, bile acid induced 177
Hypoxia, zone-specific damage in liver 287

Imipramine
hepatotoxicity 107
idiosyncratic toxicity 117
neurotoxicity 109
Immunoregulation, inflammatory bowel disease 393
Immunosuppressor therapy, treatment of liver cirrhosis 87
Inflammation
co-carcinogenic effects 132
liver cirrhosis 87, 89
Inflammatory bowel disease
experimental models 392, 394
free radicals and oxygen metabolites 375–400
pathophysiology 388, 392
therapy 395
Insectivores, venomous 202, 210
Insulin, serum-free cell culture media 360
Insulin-like growth factor, serum-free cell culture media 360
Integrins, tumorigenesis 249, 251, 253
Interferons, antifibrogenic activity 84
Intestinal epithelial permeability, inflammatory bowel disease 394
Intracellular adhesion molecule-1 241
Ionizing radiation
oxidative DNA damage 135
ROS production 135
Iron, zonation of hepatotoxicity 314
Ischemia, inflammatory bowel disease 391
Ischemia/reperfusion injury, toxic oxygen metabolites 386

Ketogenesis, zonation in liver 292
Kidney
acidification 20
effect of angiotensin converting enzyme inhibitors 194
mineralocorticoid hormone receptors 3, 5
Na^+ and K^+ transport 18, 19
Kindling, cocaine, genetic differences 225
Kupffer cells 280

Laminin 250
Lazaroids 386, 398
Leukocyte–endothelial cell interaction, inflammatory bowel disease 389, 400
Leukocyte-function-associated antigen-1, role on metastasis 251
Levorphanol, pharmacogenetic studies 231
Lidocaine, induced seizures, genetic factors 227
Lipids
effect of aldosterone on metabolism 16
peroxidation 380
serum-free cell culture media 361
zonation of metabolism in liver 291
Lipoprotein, zonation of metabolism in liver 293
Lisinopril 188
effect on chronic heart failure 190, 193
Lithogenic bile 172
Liver
antidepressant toxicity 107
cirrhosis 81–104
antifibrogenic therapy 82, 92
antiinflammatory and immunosupressor therapy 87
hepatoprotection 85
treatment to eradicate etiologic agent 84
development and structure 279
hepatocyte heterogeneity 276
determination and regulation 316
functional significance 315
innervation 320
zonation of gene expression 317
zonation of intermediary metabolism 284
amino acid and nitrogen 293
carbohydrate 288
lipids 291
oxidative energy 286
plasma proteins 297
zonation of metabolism of endo- and xenobiotics 299
bile formation 306
conjugation reactions 304
mixed-function oxidase 300
zonation of pathology
ethanol oxidation 309
heavy metal accumulation 314
peroxisomes and peroxisome proliferators 314
xenobiotic toxicity 310
zonation of signal input 317
Local anesthetics, induced seizures, genetic differences 226
Lofepramine
hepatotoxicity 107
idiosyncratic toxicity 118
neurotoxicity 109
Lymphocyte homing receptors, lymphoid tumor metastasis 247
Lymphoid cells, serum-free culture 363
Lysyloxidase inhibitors, antifibrogenic activity 94

Macrophages
activating agents 132
formation of ROS 132
Magnesium, nickel interactions 49
Mannitol 385
Maprotiline, hepatotoxicity 107
Mast cells, inflammatory bowel disease 390
Mast cell stabilizers, treatment of inflammatory bowel disease 399
MEL-14 248

Melanotransferrin, zonation in liver 314
Menadione, zonal hepatic injury 312
Metabolic zonation, liver 276, 315
Metals
  carcinogenesis 32
    arsenic 34, 37
    beryllium 36, 50
    cadmium 36, 51
    chromium 35, 39
    nickel 35, 45
    PMN activation 133
    ROS induction 138
  zonation of hepatotoxicity 314
Metastasis
  angiogenesis, adhesive interactions 239–260
  metals 34
Methotrexate, liver cirrhosis 91
3-Methylcholanthrene, ROS formation 136
Metronidazole, treatment of inflammatory bowel disease 399
Mezerein, oxidative DNA damage 145
Mianserin
  bioactivation 119
  hematologic toxicity 108
  hepatotoxicity 107
  idiosyncratic toxicity 118
α2-Microglobulin, zonation in liver 298
Mineralocorticoid hormones 1–29
  acidification 20
  gene expression 6
  K^+ transport 18
  Na^+ transport 12
  receptors 2
Mitogenic fibrinogen receptor 368
Monoamine oxidase inhibitors
  hepatotoxicity 107
  idiosyncratic toxicities 119
Morphine, pharmacogenetic studies 231
Mucin depletion, inflammatory bowel disease 391
Mucosal addressins 247, 248
Mutagenesis
  arsenic 37
  cadmium 52
  chromium 41
  nickel 46
  prostaglandin H synthase-dependent oxidation 266
Myeloperoxidase, ROS utilization 137
Myocardial infarction, effect of angiotensin converting enzyme inhibitors 191
Myocardial ischemia 193

NADPH-cytochrome c reductase, zonation in liver 300
NADPH-dependent oxidase, generation of free radicals 379
Neovascularization, extracellular matrix endothelium 242
Neural cells, serum-free culture 367
Neuropathy, induced by antidepressants 109
Neutrophils, inflammatory bowel disease 389
Nickel, carcinogenesis
  interaction with heterochromatin and magnesium 49
  PMN activation 133
  protein interactions 45
  uptake and cellular metabolism 35
Nifedipine, kinetic–dynamic responses 70
Nitrogen metabolism, zonation in liver 293
Nitrogen, oxidized metabolites 379
Nitroimidazoles, treatment of inflammatory bowel disease 399
Nomifensine
  hepatotoxicity 107
  idiosyncratic toxicity 119
Nonsteroidal antiinflammatory drugs, treatment of inflammatory bowel disease 399

Okadaic acid, PMN activation 133
Oltipraz 386
Opiate-related behaviours, pharmacogenetics 231
Oxaproline containing peptides, treatment of liver cirrhosis 93
β-Oxidation, zonation in liver 292
Oxidative damage, nickel carcinogenesis 48
Oxidative energy metabolism, zonation in liver 286
2-Oxoglutarate inhibitors, treatment of liver cirrhosis 93

Palytoxin, PMN activation 133
Perindopril 188
  effect on chronic heart failure 190
Peroxidase-mediated bioactivation 266, 268
Peroxisomes, zonation in liver 314
Phagocytes, carcinogenesis 150
Pharmacodynamic modelling 69
Pharmacogenetics 217–237
  drug-abuse research 224–233
Phenamil 14
Phorbol esters, induction of oxidative burst 132
Phosphoenolpyruvate carboxy kinase, in liver
  gene expression 321
  zonation 289
Plasma protein metabolism, zonation in liver 297
Plasma renin activity, antihypertensive drug response 74
Platelet-derived growth factor, serum-free cell culture media 361, 366
Platelet-endothelial cell adhesion molecule-1 252
Polycyclic aromatic hydrocarbons
  formation of oxidized DNA bases 147
  prostaglandin H synthase-dependent oxidation 266
  ROS formation 136
Polyethylene glycol polymer–superoxide dismutase 384
Polymorphonuclear leukocytes
  activating agents 132
  formation of ROS 131
  oxidative DNA damage 145
Polyunsaturated lecithins, effect on liver cirrhosis 94
Potassium, mineralocorticoids and transport of 18
Praziquantel 84
Prazosin, kinetic–dynamic responses 70
Primary biliary cirrhosis, protection and treatment 85
Primary sclerosing colangitis, protection and treatment 85
Progesterone, inhibition of liver cirrhosis 91
Proline analogs, treatment of liver cirrhosis 92
Prolyl-4-hydroxylase inhibitors, antifibrogenic potential 87, 93
Prostaglandin H synthase, xenobiotic metabolism by 261–273
Prostaglandins, prevention of liver cirrhosis 85
Proteins, serum-free cell culture media 358
Pyridine 2,4-dicarboxylate 93

Quinapril 188
  effect on chronic heart failure 190

Ramipril 188
  effect on chronic heart failure 190
Reactive oxygen species
  anti-oxidant defense mechanisms 382
  carcinogenesis 149
  carcinogen-mediated formation 136
  formation by tumor promoter mediated processes 131, 145
  inflammatory bowel disease 388
  ischemia/reperfusion injury 386
  nickel induced production 48
  oxidative DNA damage 142, 145, 149
  production by ionizing and U.V. radiation 135
  role in cell transformation 149
  sources 129, 138, 377
  tissue injury 380
  tumor promoters 142
Renin–angiotensin system 189
Reperfusion injury
  angiotensin converting enzyme inhibitors 192
  toxic oxygen metabolites 386
Retinoids, treatment of fibrosis 95
12-*O*-Retinoyl-phorbol-13-acetate, oxidative DNA damage 145

Saliva, mammals
  chemical properties 206
  evolutionary significance of venom 211
  need for a venom 210
  pharmacology 207
  purification of toxic components 205
  toxic properties 200, 203
Sarcophytol A 146
Schistosomiasis, liver cirrhosis 83, 84
Seizures
  cocaine-induced, genetic factors 224
  lidocaine-induced, genetic factors 227
Selenium, inflammatory bowel disease 392, 393
Serum-free cell culture
  basal media composition 357
  commercially available media 368
  conditioned media 362
  epithelial cells 365
  fibroblasts 366
  hematopoietic cells 363
  hybridomas 365
  media supplements 358
  neural cells 367
Sex differences
  alcohol dehydrogenase in liver 309
  lipid metabolism in liver 291
Shrews, venomous 200
Skin, antidepressant toxicity 108
Sodium, aldosterone and transport of 12
Sodium cromoglycate, treatment of inflammatory bowel disease 399
SPARC 245
Steroids, treatment of liver cirrhosis 87
Sulfotransferase, zonation in liver 304
Sulphasalazine, treatment of inflammatory bowel disease 396
Superoxide dismutase 382, 383
  treatment of inflammatory bowel disease 397
Superoxide dismutase mimics 385
  treatment of inflammatory bowel disease 398

Tamoxifen 146
12-*O*-Tetradecanoyl-phorbol-13-acetate
  induced oxidative burst 132
  oxidative DNA damage 145
Thiazide diuretics, kinetic–dynamic responses 73
Thrombocytopenia, induced by antidepressant drugs 107
Thymine glycol
  effect of ionizing radiation 139
  effect of tumor promoters 143
Trace elements, inflammatory bowel disease 392
Transferrin, serum-free cell culture medium 359
Transferrin receptors, zonation in liver 314
Transforming growth factor, serum-free cell culture media 361
Trazodone, hepatotoxicity 107
Trimazosin, kinetic–dynamic responses 72
2,4,6-Trinitrobenzine sulfonic acid, inflammatory bowel disease 395
Tumor-endothelial/tissue adhesive interaction 243, 245
Tumor metastasis, endothelial adhesion molecules 245
Tumor promoters 129
  formation of reactive oxygen species 131
  oxidative DNA damage 142, 145
Tumors
  interactions with extracellular matrix 249
  metals 32

Ubiquitin, effect of arsenic 39
UDP-glucuronyl transferase, zonation in liver 304
Ulcerative colitis 388
  immunoregulation 393
  intestinal epithelial permeability 394
  mucin depletion 392
  smoking 380
  therapy 395
  trace elements and vitamin deficiency 392
Urea synthesis, zonation in liver 295
Urinary bladder
  mineralocorticoids and acidification 20
  mineralocorticoid receptors 2
  Na^+ transport 12
Ursodeoxycholic acid
  protection against liver cirrhosis 85
  treatment of gallstones 174
U.V. radiation, ROS production 135

Vascular-cellular adhesion molecule-1 241
  tumor metastasis 246
Venomous mammals 199–215
  envenomation and symptomology 203
  evolutionary significance 211
  folklore 200
  pharmacology of saliva 207
  purification of toxic components of saliva 205
  species and distribution 202
Vitamins
  inflammatory bowel disease 393
  serum-free cell culture media 359
VLA-2, tumorgenicity 251, 253

Wilson's disease, liver cirrhosis 83
WR2721 398

Xanthine oxidase inhibitors 383

Zimeldine
  hepatotoxicity 107
  idiosyncratic toxicity 117, 120
Zinc, inflammatory bowel disease 392
Zonation in liver 275-354
  gene expression 317
  intermediary metabolism 284
  metabolism of endo- and xenobiotics 299
  pathology 308
  signal input 317
